ME Series Gyra-Vib® Separator

The ME Series vibratory separator utilizes an innovative drive system giving the user greater control over screening applications – providing accurate particle travel and increased production. Available in a wide range of sizes and finishes, the vibratory separator can integrate nicely within existing processes or new applications.

- A Standard NEMA foot-mounted motor. Explosion-proof motors can be used for hazardous locations and can be supplied in any voltage requirement.
- **B** The variable speed pulley is easily accessible and mounted on the motor, isolating the screen vibration from the motor. The motor is mounted on an adjustable motor slide base allowing for a variable speed range of 950 to 1450 rpms.
- **C** The slide base is adjustable for the control of frequency. Power is transmitted from the motor to the balance cages using a variable speed belt.
- **D** The reversible center locking devices allow positive screen tensioning up or down.
- E Balance cages are mounted on a large diameter shaft between standard, heavy-duty, double spherical roller bearings. Specially designed bearing housings have greater grease capacity for long life as well as convenient lubrication fittings.

The innovative ME Series is designed for projects that require a wide range of vertical and horizontal action intensities. It features a variable speed pulley and a motor mounted on an adjustable slide base for precise control of frequency – providing accurate material travel and increased production.

The ME variable speed rotational system with balance cages assures exact control of lift/throw components. These balance cages allow for finer adjustments and more efficient screening compared to a fixed rpm. Off-center weights on the balance cages produce eccentric throw. While some weights are bolted in position, others drop freely over pins. The movable weights make it easy to change flow patterns to accommodate variations of product specifications.

The upper balance cage weights influence horizontal movement of particles on the screen. At the same time, weights on the lower balance cage cause axis tilt, producing a lift in the gyratory screening process. The configuration of weights on the lower balance cage is termed the "tilt convey system". Midwestern Industries' engineers establish the most effective tilt convey configuration for the material being processed.

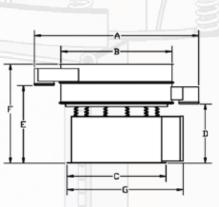

Scalping or Product Sizing

As the material travels across the screening surface the particles greater than the selected screen opening are retained, while finer particles pass through screening media. This process repeats itself upon each screening surface, Midwestern separators come in single and multiple deck units.

ME Series Gyra-Vib® Dimensions - Single Deck

MODEL	A	В	с	D	Ε	F	G					
ME-24	38 1/4"	22 1/2"	22 7/8"	21 1/2"	26"	31 5/8"	30 7/8"					
ME-30	46 1/2"	30 1/8"	27 3/4"	21 1/2"	28 7/8"	36 3/4"	38"					
ME-36	56 3/8"	34 1/8"	32 3/8"	24"	32 3/4"	42 7/8"	39 7/8"					
ME-40	60"	37 5/8"	32 3/8"	24"	32 3/4"	42 7/8"	39 7/8"					
ME-48	68 1/4"	45 3/4"	41"	25"	33 3/4"	43 3/4"	43 3/4"					
ME-60	79"	57 1/16"	47"	25"	33 3/4"	43 3/4"	48 7/8"					
ME-72	94 5/8"	68 1/2"	54 1/2"	30 1/4"	40 1/8"	52"	58"					

The dimensions above reflect a basic, single-deck separator. Multiple decks and accessories will alter overall dimensions depending on your screening needs. A detailed drawing is provided to each customer for individual accuracy.

Frames

Midwestern services all your screening needs by manufacturing premium frames and accessories to fit most round vibratory separators. These items are designed to keep production levels high and downtime at a minimum. All of our frames are constructed to meet the demanding needs of the processing industry.

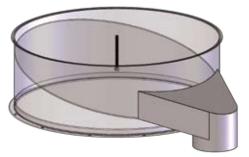

Kleener Tray System

The kleener tray clamps securely in place and does not interfere with screen changing. Its unique "Z" ring mounting provides unparalleled rigidity. The system can be used with or without a distribution pan and existing equipment can be easily converted to accept this system. The clip-in style operates more quietly than the perforated plate style.

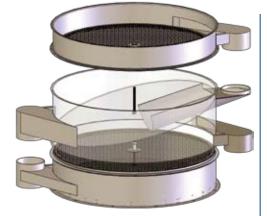

RAS System

Available in a low-profile, single or doubledeck design, the RAS system allows for the fines to fall through the screen while the oversized material gently cascades over the screen's edge and into an inclined path to the discharge chute. Perfect for applications with a huge percentage of oversized material and slurries.

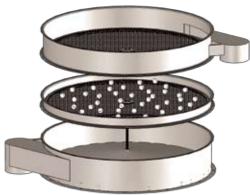

Diverter Frame

The diverter frame is useful when dealing with a high volume of undersize. After the material passes through the screen mesh, it is angled directly to the downspout for quick discharge. Can easily be implemented in both dry processing and liquid/solid applications.

Series Feed Frame

Specifically manufactured for high capacity screening, the series feed frame gives the user the ability to screen the material twice with one machine.

Ball Tray System

The ball tray assembly will reduce blinding caused by damp material and near-size plugging of the sizing screen mesh. Also, the secondary vibration caused by the bouncing balls against the sizing mesh helps stratify the material for greater throughput. The standard 2" ball tray (as illustrated) or optional internal ball tray systems are available. The ball tray assembly can be installed on most makes of separators now in service.

Riser (Base)

In order to help our customers meet specific height requirements, Midwestern offers risers that can easily attach to the base of most separators. Available at the time of purchase or be retrofitted at a later time, the risers can be constructed to meet your industries' requirements.

Replacement Screens & Parts

Midwestern recognizes your need for one supplier to offer a wide variety of screens and parts for all your round vibratory separators regardless of make or model. We work with our customers to ensure Midwestern offers the type of screens you want in the sizes you need.

Round & Square Screens

Sizes range from 18 to 72 inches and can fit nearly every make and model of separators with various mounting methods – including strict food grade standards.

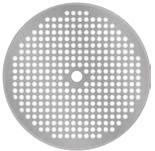

Clear Opening Screens Midwestern offers clear opening screens and customer weaves not shown on our mesh chart. Speak to a sales professional for options and availability.

Ultrasonic Screens

In a constant effort to supply our customers with innovative screening ing needs, our perforated screens options, we offer ultrasonic screens for various makes and models. rescreening is also available.

Perforated Screens

Customized to meet your screencome in a wide range of sizes and are available with round and slotted openings.

Sandwich Screens

Plastic sliders or rubber balls are sandwiched between a sizing screen and the back-up mesh providing added vibration dislodging near size particles and allowing material to flow more efficiently.

Bulls-Eye Screens

Applying silicone beads in a bullseve pattern between the sizing screen and back-up mesh reduces friction while extending the life and performance of the screen.

Wagon Wheel Screens

Dense material on fine mesh screens and larger diameter screens can benefit from the added support provided by the wagon wheel design. Made to fit most makes and models of separators.

Custom Screen Options

As a manufacturer, not a reseller, Midwestern works with our customers to provide customized screening solutions. From nylon mesh to "white wall" screens, we supply unconventional screens for your application. Speak to a sales professional for options.

- Select from 18 to 72-inch diameter round screens and square screens in 22 and 44-inches.
- Custom-woven screen meshes.
- All new round screens include free gaskets.
- Able to meet industry specifications.
- Competitive prices.
- On-time deliveries.
- Supplier for most makes and models!

Midwestern's Quality is Unmatched

We continually invest in the latest manufacturing processes to ensure our screening products exceed your expectations.
